PRESS RELEASE

Requirements of EU REACH

Industry urges EU regulators to give full recognition to the One Substance- One Registration (OSOR) and 'no data- no market' principles under REACH to avoid unfair competition.

23.05.2014

Industry has invested hugely in financial and human resources in order to comply with the requirements of EU REACH. The process of joint data gathering, testing and interpretation has been particularly demanding of industry resources. In line with the Product Stewardship and Sustainable Development Goals of companies, REACH dossiers were professionally compiled and often contain large volumes of high-quality scientific information that is now largely publicly available via the ECHA dissemination website.
